

Solution Architecture

Date	29 September 2026
Team ID	6ab4fddea238dc999eb665e9
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	5 Marks

Solution Architecture Diagram:

High-level architecture of PocketSmart AI showing the presentation layer, API/application services, external Gemini integration, and persistent data storage.

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the user-facing planning and recommendation interface, including Home Interior, Party and Jewelry planners, dashboard, history and recommendation details.	HTML5, CSS3, JavaScript, Jinja2
API / Application Layer	Receives requests, validates inputs, manages routes and sessions, invokes planner logic and returns recommendations and details to the client.	Python, FastAPI, Uvicorn, Pydantic
Core Recommendation Service	Processes budget and preference requirements, validates recommendation constraints and prepares structured AI-powered recommendations for each planning domain.	Python, Gemini API, Pydantic validation
Database / Storage	Persists user accounts, application/session information, recommendation history and related planning data for later retrieval.	SQLite
